DocuDZ

All set, stress less

Dossier prêt, esprit tranquille ملفك جاهز، وبالك مرتاح

UI/UX Design Submission

Offline-first Android assistant to prepare Algerian administrative files: university registration, passport, driver's license and CNAS. Flutter, Material 3.

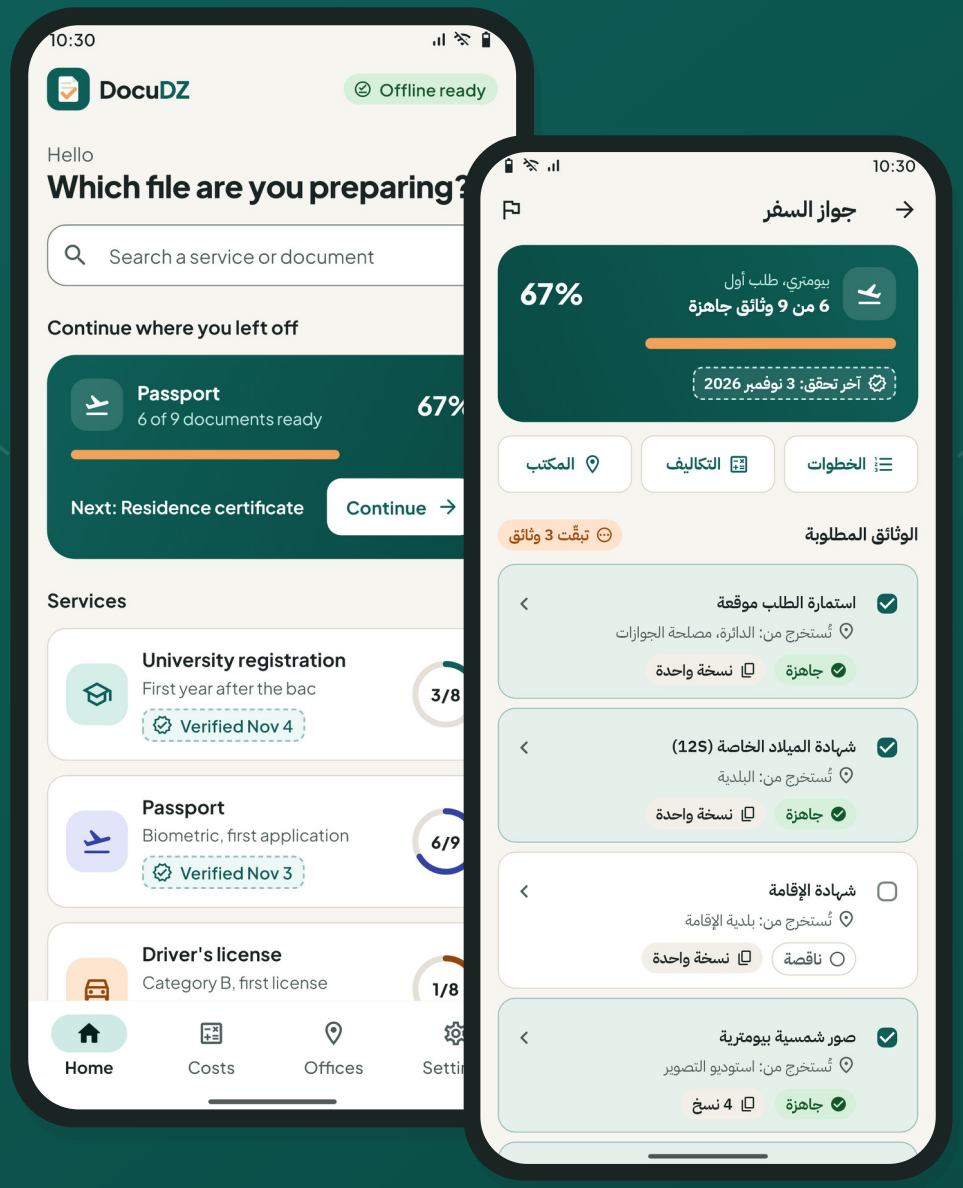

TEAM

DRIS Fadia · NEFRAOUI Marya

ENSIA, National School of Artificial Intelligence, Algeria

Mobile Development project · 12 November 2026

Independent student project. Not an official government service.

01 · PRODUCT RECAP

One missing stamp means one more trip to the office.

The problem

- Requirements are scattered across counters, word of mouth and old social-media posts.
- A missing document, stamp or the wrong office means coming back another day.
- Offices work Sunday to Thursday, so every extra trip costs a morning or a day off.

Who it is for

- Students and young adults who just became independent, handling their first files alone.
- Arabic / French bilingual readers; many prefer an Arabic, right-to-left interface.
- Entry-level Android phones (2 GB RAM, Android 10) and patchy mobile data.

Amina, 18: first university registration, far from home.
Yacine, 23: first job, needs CNAS, then a passport.

What DocuDZ gives

- One offline checklist per service, ticked as documents are gathered.
- Where to get each document, and the order of steps.
- The stamp total in DZD, the right office and its opening days.
- A "Last verified" date on every list, and Report an error.

Arrive at the counter with a complete file, the first time.

What it is not: an official service. It submits nothing, needs no account, and works without internet.

* Sample content for design purposes, to be verified against official sources before release.

02 · DESIGN PRINCIPLES

Calm, trustworthy, and built to save trips.

Calm, not clinical

Warm paper background, deep teal, a single apricot accent. Generous 8-pt spacing and reassuring microcopy ("All set!").

Trust is visible

A dated "Last verified" stamp on every list, "Not an official service" on key screens, Report an error one tap away.

Offline by default

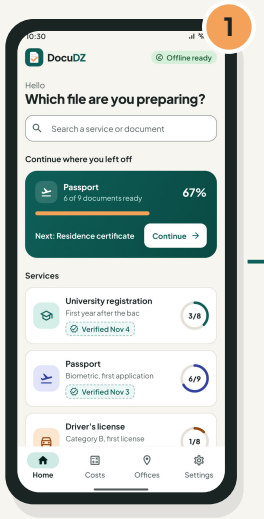

All content is bundled. No login, no spinners, no network error states to design around.

Fewer trips

Each document says where to get it; steps are ordered to group visits; tips flag classic return-trip traps.

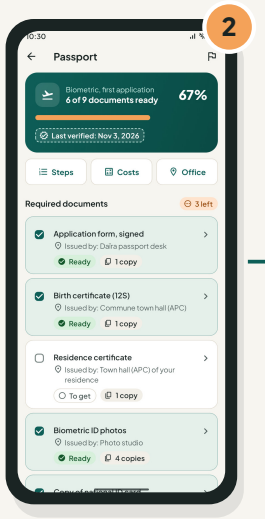

USER JOURNEY · FROM "I NEED A PASSPORT" TO "I ARRIVE WITH A COMPLETE FILE"

"I need a passport"

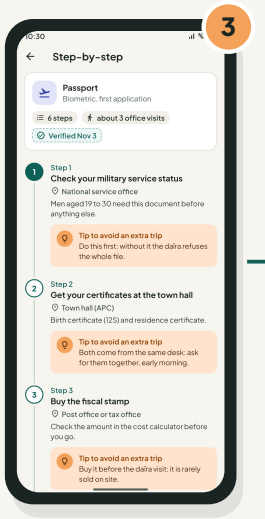

Home

Pick "Passport", or search.

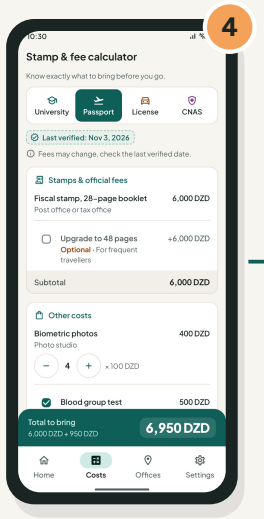

Checklist

Tick what I already have: 6 of 9.

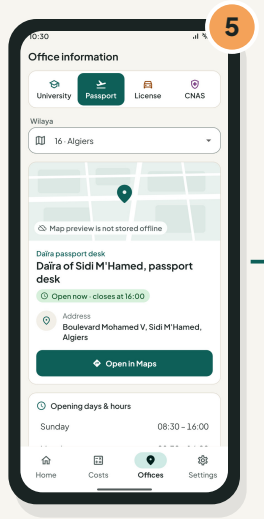

Steps

Know the order; read the trip-saving tips.

Costs

Total to bring: 6,950 DZD.

Office

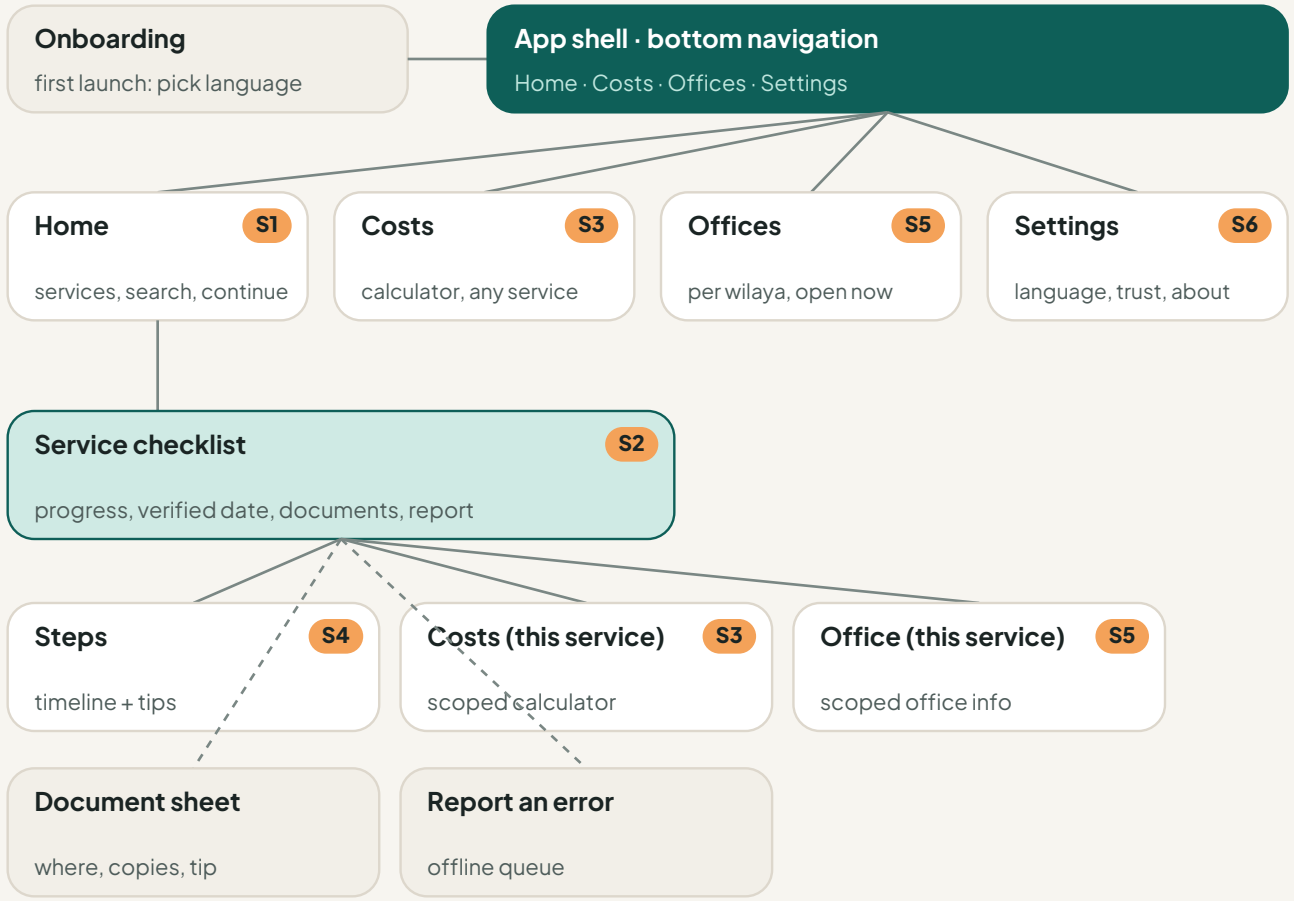

Right daïra, open Sunday to Thursday.

"I arrive with a complete file"

* Sample content for design purposes, to be verified against official sources before release.

03 · NAVIGATION MAP

Four tabs to browse, focused flows to act.

Step tile + "avoid an extra trip" tip

1
Step 1
Check your military service status
National service office
Men aged 19 to 30 need this document before anything else.
Tip to avoid an extra trip
Do this first: without it the daïra refuses the whole file.

Sticky TOTAL bar

Total to bring
6,000 DZD + 950 DZD
6,950 DZD

Bottom sheet · 28 dp radius, one primary action

Fee group · optional item · subtotal

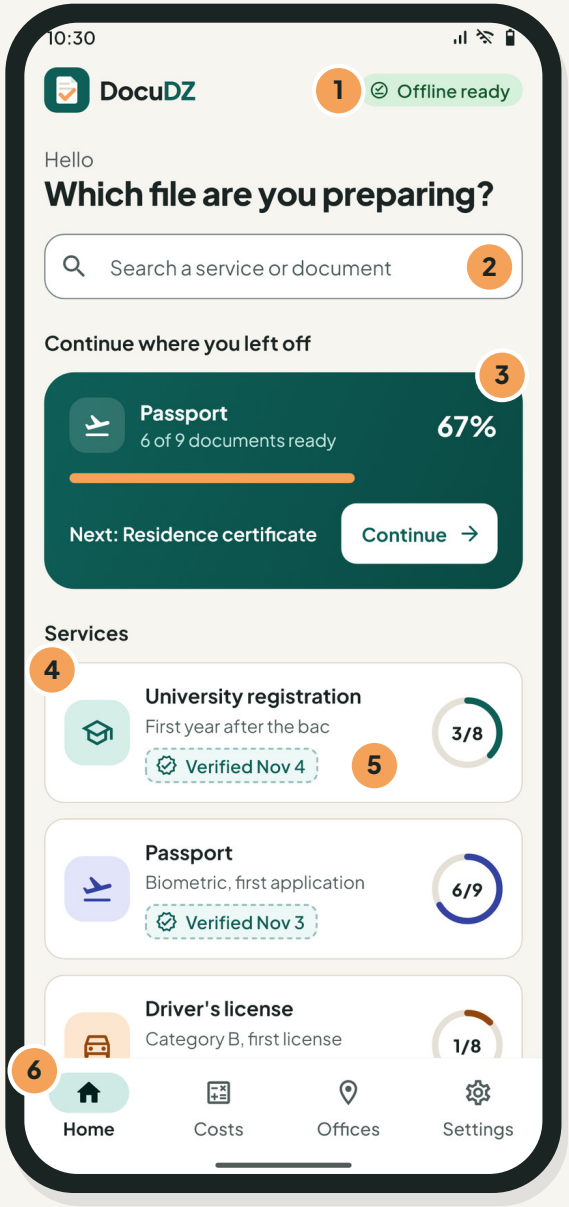

Stamps & official fees
Fiscal stamp, 28-page booklet — 6,000 DZD
Post office or tax office
Upgrade to 48 pages — +6,000 DZD
Optional · For frequent travellers
Subtotal — 6,000 DZD

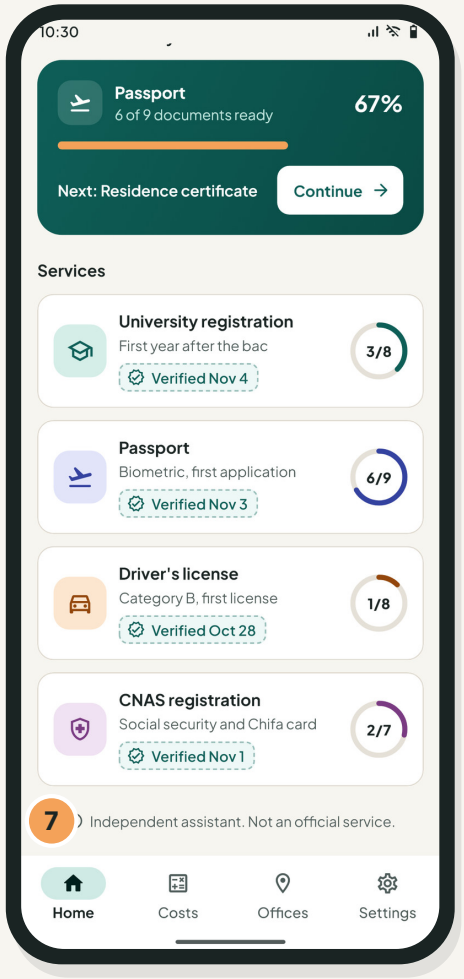

"Last verified" stamp, on a teal header

Last verified: Nov 3, 2026

Offline chip

Offline ready

Scrolled: all four services, then the trust footer.

S1 · HOME / SERVICE CATALOGUE

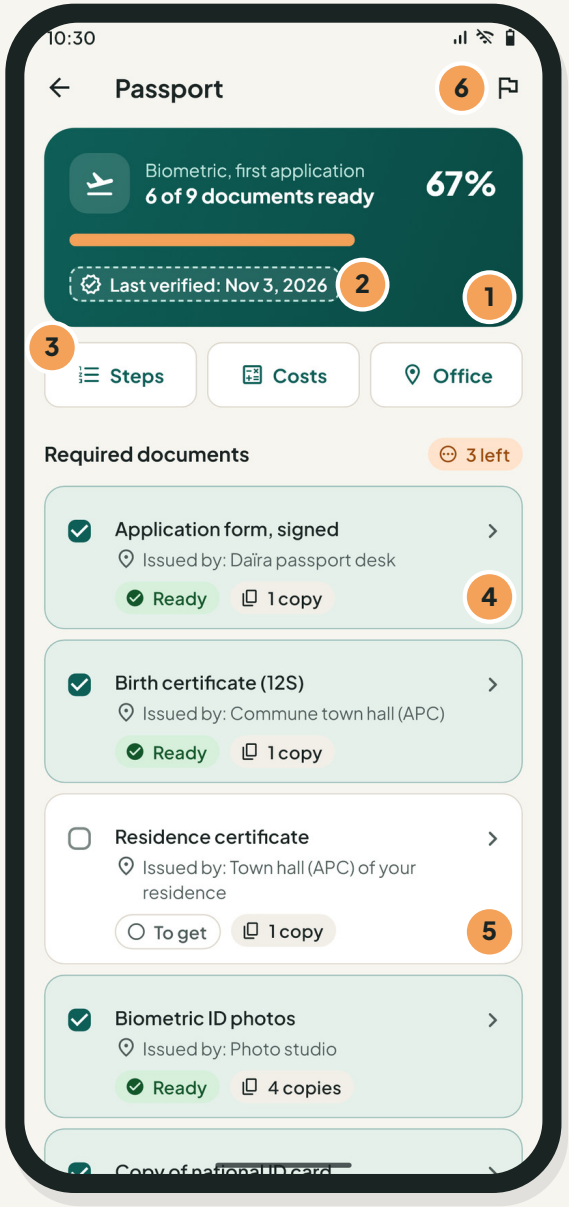

Start from the file, not the administration.

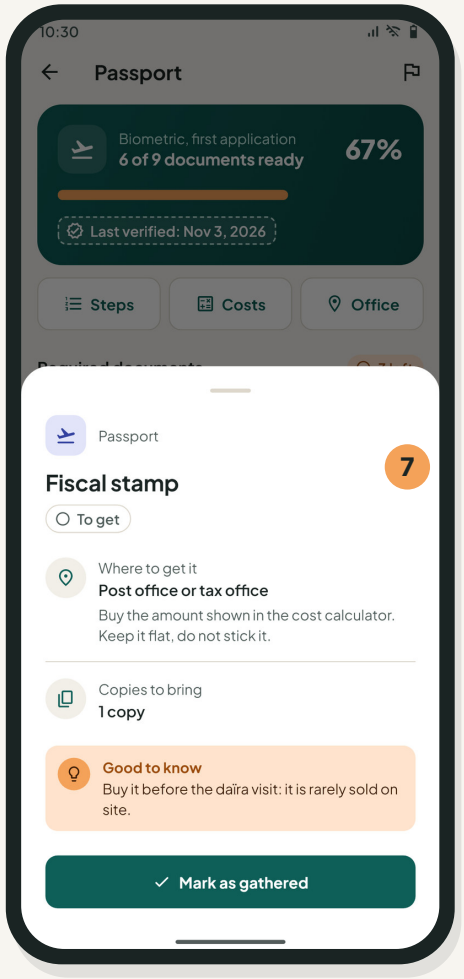

Greeting, one search field, a "continue" shortcut and the four services with their progress.

F1 F2 F7 F8

1. **Offline status, always visible** F1
   A calm green chip confirms everything works without data. No spinners, no error screens.
2. **One question, one search** F1
   Matches services and individual documents ("birth" finds 4 checklists). Empty state designed.
3. **Continue where you left off** F2
   Shows 67% and the next missing document, so a returning user acts in one tap.
4. **Service card with done/total ring** F1 F2
   Own tint and icon per service; the ring prints 3/8, so colour is never the only cue.
5. **Last-verified stamp on every card** F7
   The dashed "rubber stamp" badge is the product's promise: dated, checked content.
6. **Four-tab navigation** F3 F6 F8
   Home, Costs, Offices, Settings. Labels always shown at 14 sp; a 4-tab maximum keeps it simple.
7. **"Not an official service" footer** Trust
   Repeated on Home, Checklist, Steps, Onboarding and Settings. No flags or emblems anywhere.

* Sample content for design purposes, to be verified against official sources before release.

Bottom sheet: Fiscal stamp details.

S2 · INTERACTIVE CHECKLIST

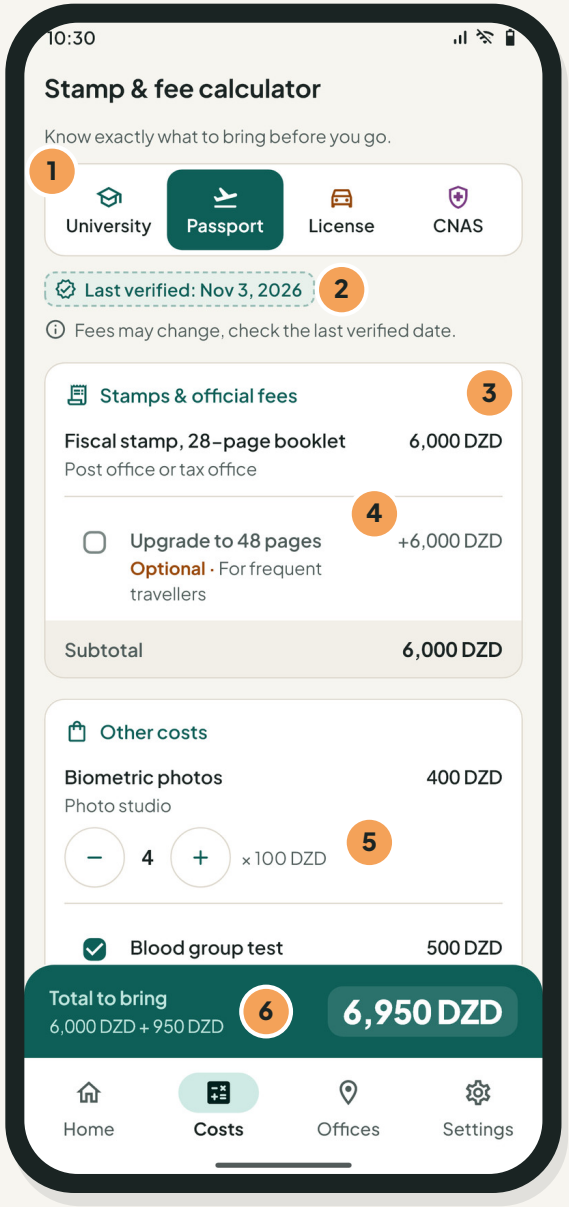

Tick what you have. See what is missing.

One list per service with progress, the verified date, where each document is issued, and a detail sheet.

F2 F4 F7

1. **Progress at a glance** F2
   "6 of 9 documents ready", 67% and an apricot bar. Ticks are saved on the phone only.
2. **Last verified: full date** F7
   On every checklist header. Accuracy is the product, so freshness is never hidden.
3. **Steps · Costs · Office** F3 F5 F6
   One tap each, already scoped to this service: no re-selecting "Passport".
4. **Ticked state** F2
   Filled checkbox, mint tile and a "Ready" pill with an icon: readable without colour.
5. **Unticked state + issuing office** F2 F4
   "To get" pill, copies needed, and "Issued by: Town hall (APC) of your residence".
6. **Report an error** F7
   Flag in the app bar plus a full-width button at the end of the list. Works offline (queued).
7. **Document detail sheet** F4
   Tap a row: where to get it, copies, a tip and one primary action, "Mark as gathered".

* Sample content for design purposes, to be verified against official sources before release.

S3 · STAMP COST CALCULATOR

Know the total before leaving home.

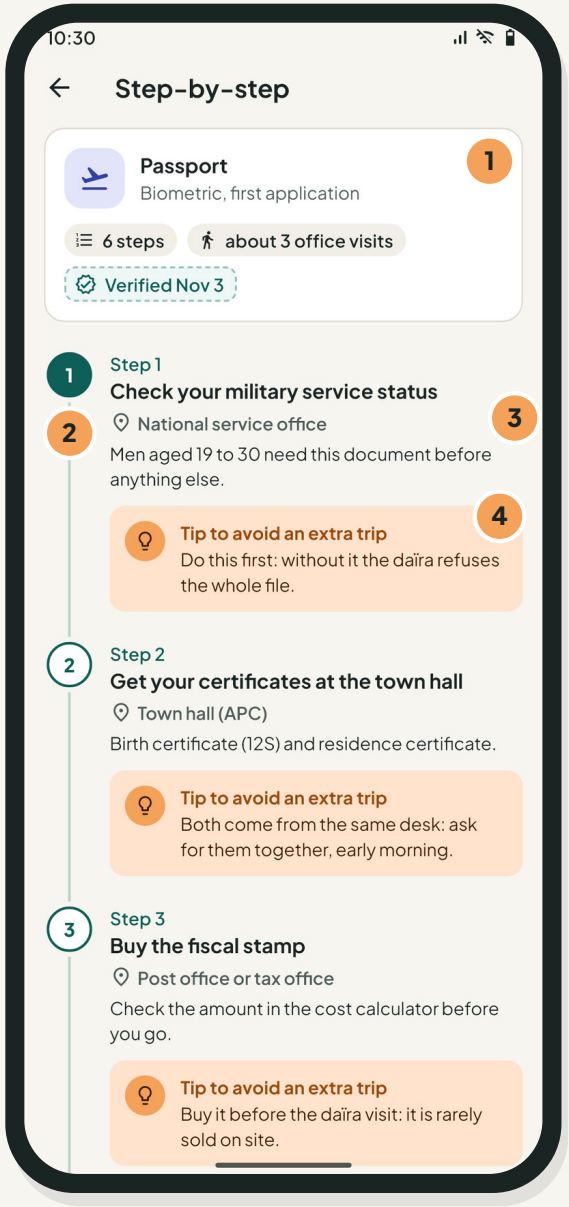

Per-stamp line items in DZD, optional items and quantities, subtotals and an always-visible TOTAL.

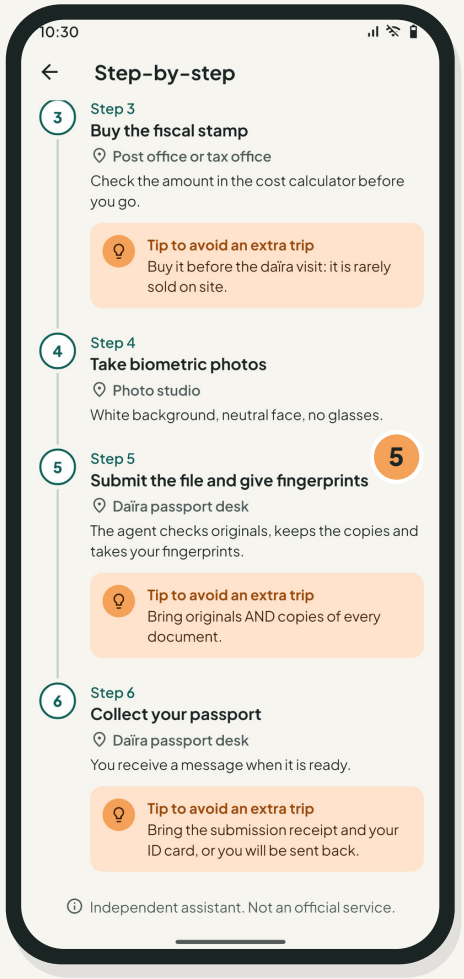

F3 F7

1. **Service switcher** F3
   Four equal segments with icon and short name: always fully visible, in every language.
2. **Last verified + "Fees may change"** F7
   The caveat sits above the numbers, next to the verified date, not in fine print.
3. **Stamps & official fees** F3
   Where to buy each stamp, amounts end-aligned in tabular figures, then a subtotal row.
4. **Optional items** F3
   A checkbox adds them. When off, the row shows what it would add (+6,000 DZD) in muted ink.
5. **Quantity steppers** F3
   48 dp minus / plus buttons for photos and copies; totals update instantly.
6. **Sticky TOTAL** F3
   Largest number on screen, always above the tab bar, with the official / other split.

How the passport total is computed (sample data)

Fiscal stamp, 28-page booklet	6,000
Biometric photos 4 × 100	400
Blood group test (optional, on)	500
Photocopies 5 × 10	50
Upgrade to 48 pages (optional, off)	+6,000 not added
Total to bring	**6,950 DZD**

Scrolled: submission and collection.

S4 · STEP-BY-STEP PROCESS

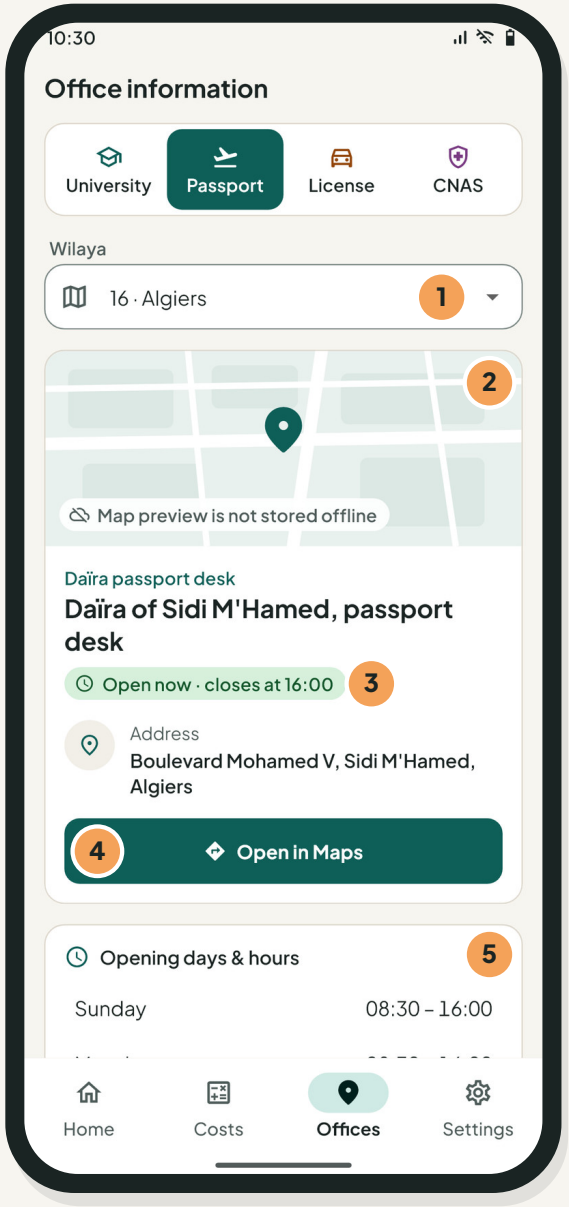

The right order is half the work.

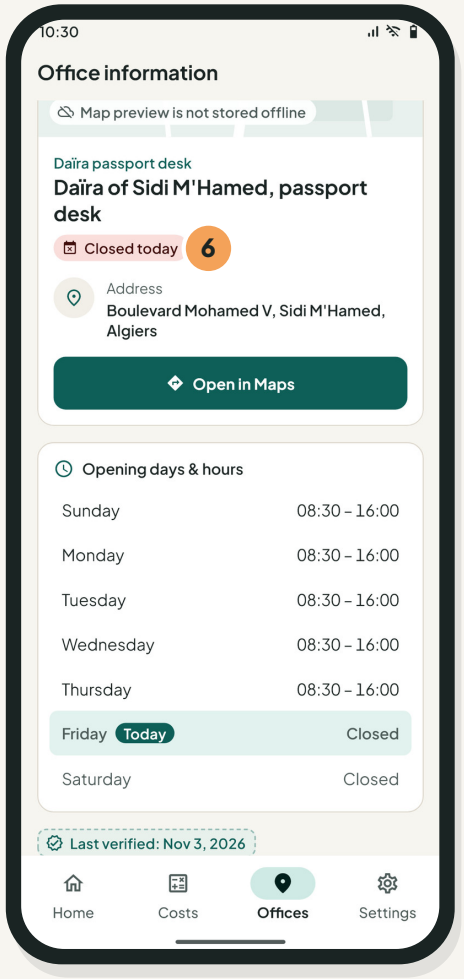

An ordered timeline: what to do, where to go, and tips that prevent the classic return trip.

F5 F4 F7

1. **Summary first** F5 F7
   Number of steps, expected office visits and the verified date, before any detail.
2. **Numbered timeline rail** F5
   Connected circles, the first one filled. The rail sits on the start side, so it moves right in Arabic.
3. **Where to go, per step** F4 F5
   Each step names its place (national service office, town hall, post office, daïra).
4. **"Tip to avoid an extra trip"** F5
   Apricot is reserved for trip-saving advice, so these callouts stand out from everything else.
5. **Order that saves trips** F5
   Prerequisites first: e.g. buy the fiscal stamp before the daïra, where it is rarely sold.

* Sample content for design purposes, to be verified against official sources before release.

Friday: closed today.

S5 · OFFICE INFORMATION

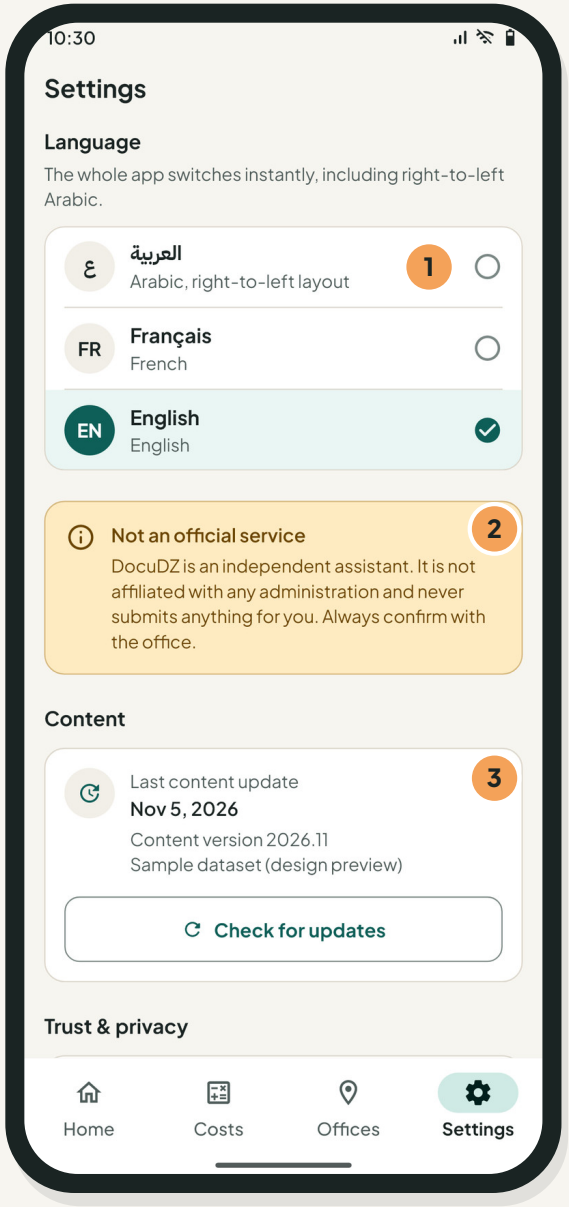

The right office, on the right day.

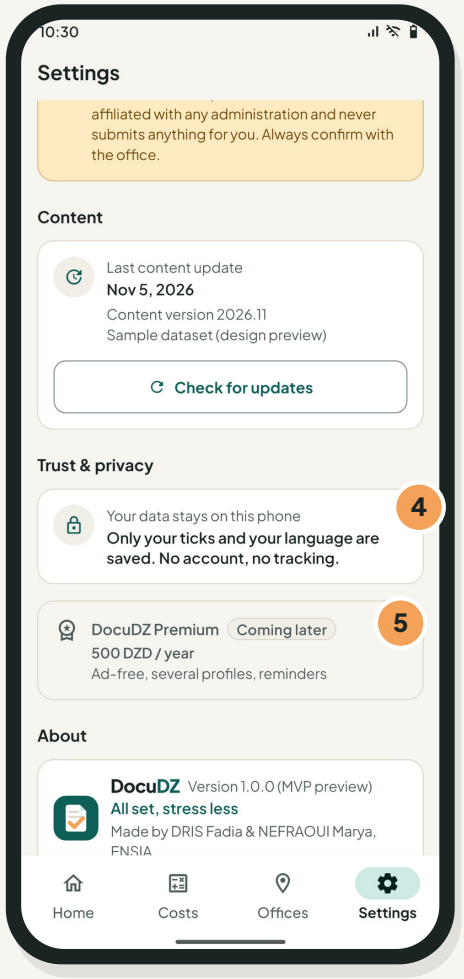

Pick a wilaya: office name, address, opening days and a live open / closed status, all offline.

F6 F7

1. **Wilaya selector** F6
   Code + name ("16 · Algiers"), as people say it. Sample data: 3 wilayas; v1 targets all 58.
2. **Offline map placeholder** F6
   Vector streets and a pin drawn on-device: no network, no image weight, clearly labelled.
3. **Open now / closed today** F6
   Computed on the phone from the hours and the clock; icon + text + colour.
4. **Open in Maps** F6
   Hands the address to the phone's Maps app (geo: intent) instead of embedding a map SDK.
5. **Opening days & hours** F6
   Sunday-first week (Algerian working week); today highlighted with a "Today" badge.
6. **Closed-today state** F6
   On a Friday the pill turns red with a calendar icon and the table marks the day closed.

* Sample content for design purposes, to be verified against official sources before release.

Scrolled: privacy, Premium, About.

S6 · SETTINGS & TRUST

Language, honesty and freshness in one place.

Language switch, the not-official notice, content date and update check, privacy, and a quiet Premium teaser.

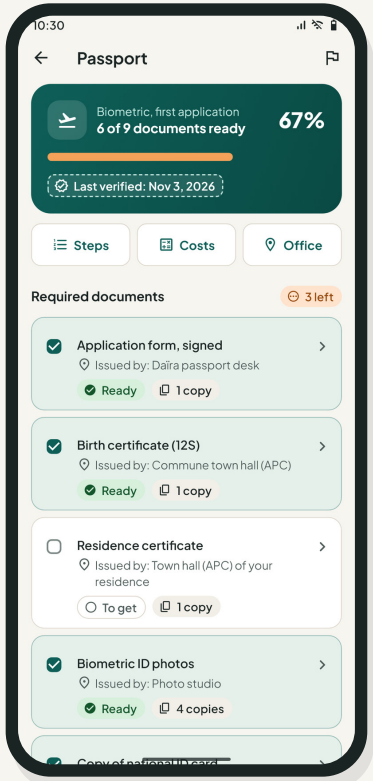

F8 F7

1. **Language, in its own script** F8
   Arabic, Français, English, each written in its own script. Switching is instant and flips the whole app to right-to-left.
2. **Not an official service** Trust
   Plain-language disclaimer: independent, submits nothing, always confirm at the office.
3. **Content freshness** F7
   Last content update, content version and "Check for updates".
4. **Privacy promise** Trust
   Only ticks and language are stored, on the phone. No account, no tracking.
5. **Premium teaser, deliberately quiet** Later
   Outlined, muted, non-interactive, "Coming later": 500 DZD / year, ad-free, profiles, reminders. Not in v1.

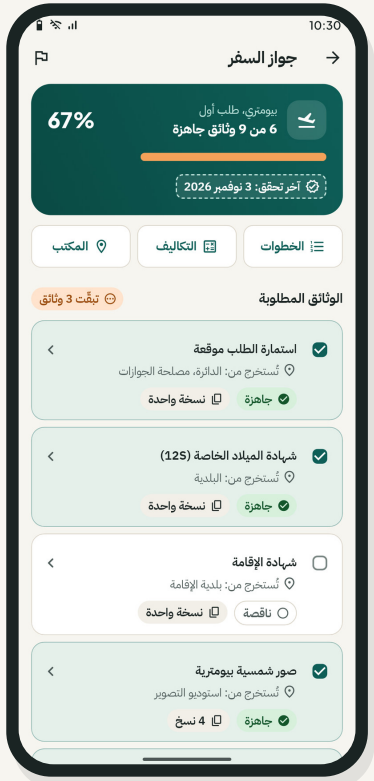

* Sample content for design purposes, to be verified against official sources before release.

06 · RIGHT-TO-LEFT SHOWCASE

Arabic is a first-class layout, not a translation.

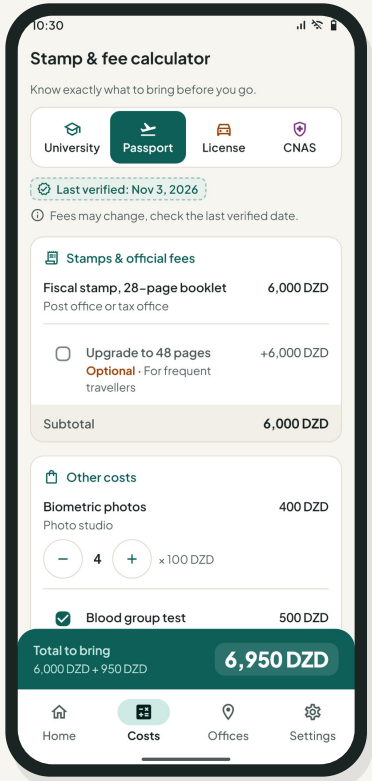

EN · LTR

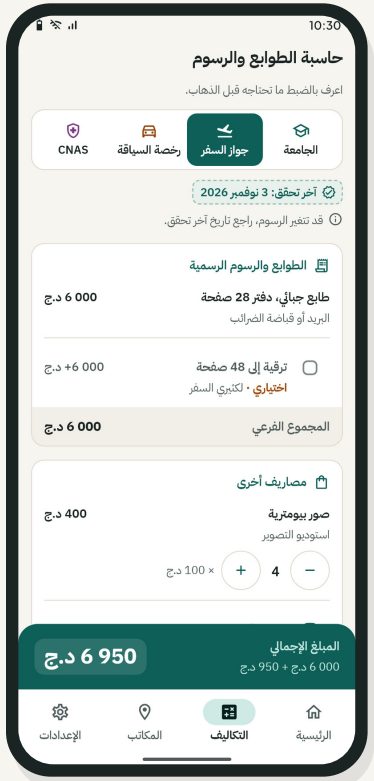

AR · RTL

Checklist

Checkbox moves to the right, chevrons point left, the back arrow points right; the progress bar fills from the right.

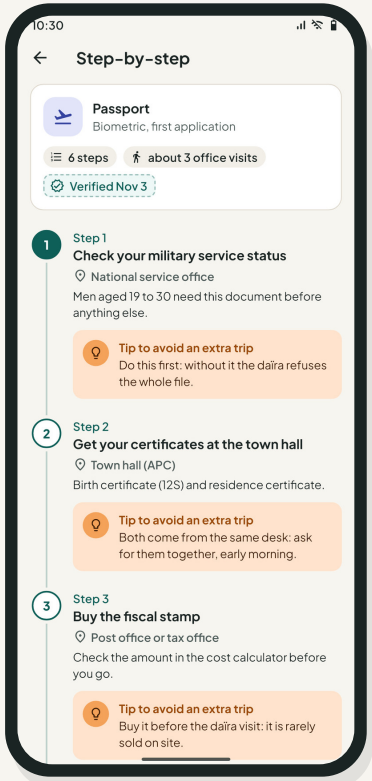

EN · LTR

AR · RTL

Costs

Amounts sit on the end (left) side; the "+6 000" sign stays attached thanks to a bidi mark; Western digits, as used in Algeria.

EN · LTR

AR · RTL

Steps

The timeline rail and numbered circles move to the right edge; tips and place icons follow the reading direction.

How: only EdgeInsetsDirectional, AlignmentDirectional and start / end in the code, no hardcoded left / right. Directional icons mirror automatically. The DocuDZ wordmark, times and fractions like 3/8 stay left-to-right.

* Sample content for design purposes, to be verified against official sources before release.

07 · MULTILINGUAL

Same screen, three languages, switched at runtime.

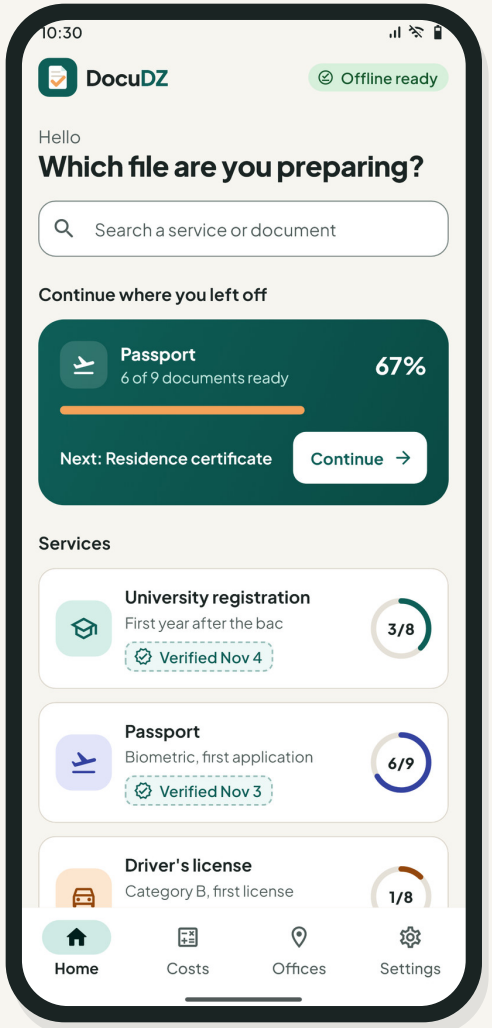

العربية

Français

English

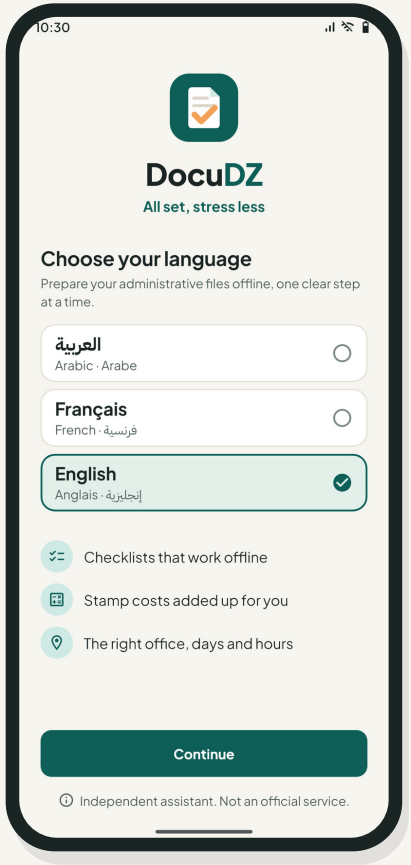

- **flutter_localizations + intl**: three ARB files (ar, fr, en), **117 keys**, generated with gen-l10n. Content (documents, offices, fees) is localised in the bundled JSON.
- **ICU plurals**, including the Arabic forms (one, dual, 3 to 10, 11+): "1 copy", "2 copies" and "4 copies" each get their own Arabic wording.
- **Algerian conventions**: Western digits 0-9, ar_DZ month names, currency DZD (EN) / DA (FR) / Arabic dinar abbreviation (AR), week starting Sunday.
- **French runs ~20% longer**: every row wraps or ellipsizes. Tests fail on any overflow: 0 found in 51 renders and at 130% text size.
- **Fonts**: Plus Jakarta Sans for Latin, IBM Plex Sans Arabic for Arabic, each the fallback of the other, so mixed Latin / Arabic lines render correctly.
- **Instant switch** from Settings or Onboarding; no restart, no theme cross-fade.

* Sample content for design purposes, to be verified against official sources before release.

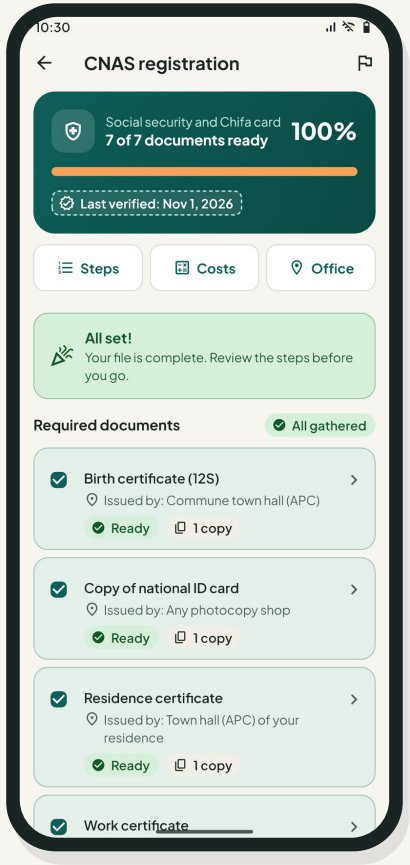

08 · KEY STATES AND EDGE CASES

Designed beyond the happy path.

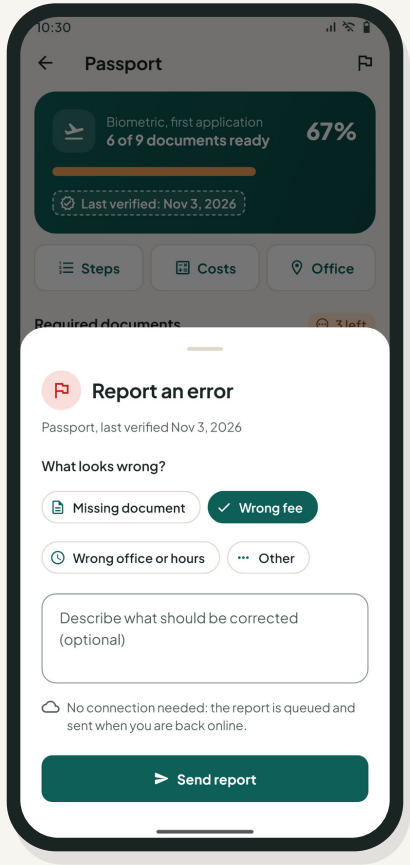

Onboarding

Language first, with the value in three lines. Shown on first launch only.

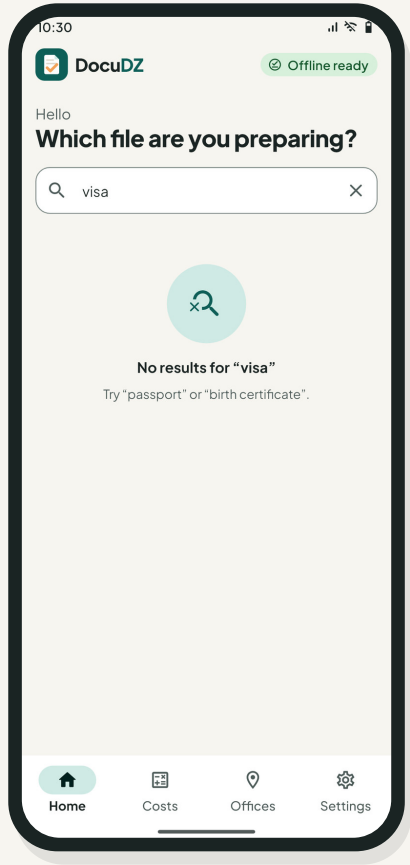

"All set!"

A full checklist turns into a green celebration banner and a check ring.

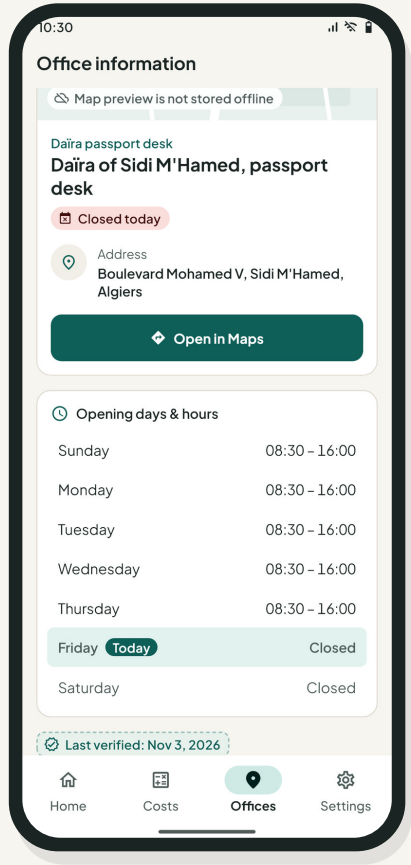

Report an error

Category chips, optional text; queued offline and sent later.

Empty search

Friendly empty state with example queries instead of a blank list.

Closed today

Red pill + calendar icon; Friday flagged as closed in the week table.

* Sample content for design purposes, to be verified against official sources before release.

09 · ACCESSIBILITY AND PERFORMANCE

Made for every reader and a 2 GB phone.

72	0	48 dp	14 sp	0	1.5 MB
automated tests pass	layout overflows found	min touch target	smallest text	bitmap images in UI	all bundled fonts

Accessibility

- **Touch targets ≥ 48 dp** for checkboxes, steppers and buttons, enforced by Flutter's androidTapTargetGuideline test on 5 screens.
- **Text ≥ 14 sp** everywhere, chips and nav labels included (no shrinking floating labels). At 130% system text size nothing overflows (tested in FR and AR).
- **WCAG AA contrast** for every text pair; pixel-checked by textContrastGuideline on Home, Office and Checklist.
- **Never colour alone**: ticked = checkbox + "Ready" + icon; open / closed = icon + words; the progress ring prints 3/8.
- **Screen readers**: labels on checkboxes ("Birth certificate, Ready"), progress and selectors; the total is a live region.

Performance & offline-first

- **No images**: logo, map placeholder, rings and stamps are CustomPaint vectors; icons come from the tree-shaken Material font.
- **Small footprint**: static font weights only, ~60 KB content JSON, no network, analytics or google_fonts packages. Target APK well under 30 MB.
- **Cheap rendering**: static progress bars, InkRipple instead of InkSparkle, fade page transitions, no theme cross-fade on language switch.
- **Offline by design**: SQLite seeded from bundled JSON; the only optional network touchpoints are "Check for updates" and sending queued reports.
- **Light state**: one ChangeNotifier and 4 light tabs; only ticks and language are persisted.

TEXT CONTRAST SAMPLES · WCAG AA NEEDS 4.5:1

Aa 14.6:1	Aa 6.4:1	Aa 7.5:1	Aa 5.9:1	Aa 6.3:1	Aa 7.2:1	Aa 7.2:1	Aa 6.5:1

10 · NEXT STEPS TO THE MVP (26 NOVEMBER 2026)

UI is built; data and device work remain.

	Feature	UI	Remaining for v1
F1	Offline checklist per service	✓ Built	SQLite seeded from bundled JSON (sqflite)
F2	Tick-off, progress saved	✓ Built	Persist ticks in SQLite (in-memory today)
F3	Stamp cost calculator	✓ Built	Verified amounts per service
F4	Where to get each document	✓ Built	Verified issuing offices
F5	Step-by-step + tips	✓ Built	Verified order and tips
F6	Office info per wilaya	✓ Built	All 58 wilayas; geo: intent via url_launcher
F7	Last verified + Report an error	✓ Built	Report queue + send (mailto / form)
F8	Language switch AR / FR / EN	✓ Built	Persist choice; native-speaker review

Built already (Flutter 3.47, Material 3): 6 core screens + onboarding, empty state and report sheet; design-token theme; AR / FR / EN with runtime switch and full RTL; JSON mock repository; flutter analyze clean; 72 passing tests (behaviour, accessibility, 51 headless screenshots).

PLAN

- **12 Nov** — **UI/UX submission**
  This PDF + Flutter screens (6 core + 3 extras).
- **13–16 Nov** — **Data layer**
  sqflite repository, persisted ticks and language.
- **17–20 Nov** — **Content verification**
  Check the 4 services against official sources; office list.
- **21–23 Nov** — **Hand-offs**
  Report queue, Open in Maps, content-update check.
- **24–25 Nov** — **Device testing**
  2 GB Android 10 phone, TalkBack pass, APK size check.
- **26 Nov** — **MVP release**
  Signed APK and release notes.
